

APP NAME: Fresh

Wireframe for app version:

Step 4: Create a Program Specification. Based on your research you identified requirements for what your app must do. Now you need to create a program specification. This means you should include all the buttons, the text, and the images that will be used in the app. You should also include the text that will be used in the app. For example, if clicking a button takes me to another screen, I should draw an arrow from that button to the drawing of the screen.

U.S. Kitchin might be good friend to use.
